VENATTA® WALL APPLICATION

1. PRIMING

On absorbent substrates, apply Colortek Fondo F on the properly primed and clean substrate.

On blocked or non-absorbent substrates such as glazed tiles, use Colortek Neogrip after slightly sanding the surface. Large tile joints should be removed and treated with our epoxy joint filler and surface repair putty, Colortek SX2 FillWell.

2. VENATTA APPLICATION

Apply the first coat of Venatta with an inox trowel and leave the surface to dry.

Apply a second coat of Venatta and while the coat is still wet, create the Marble stone veins in the surface using tool REF. 793 – 49503.

Once the pattern is created, leave the surface to dry to approximately 60% before going over it with an inox trowel used to press and smoothen the marble pattern.

If you feel the surface has dried while ironing the surface, you can spray water mist to dampen the substrate.

Once this step has concluded, leave the surface to dry.

3. STAINING

Choose your main marble stone color and tint either Colortek C1A or C1C to paint over the Venatta surface. This will set the main tone of the final effect. For dark marble finishes, you can use Colortek C1A R10. You can also opt to use some of our decorative paints as the effect's main base. For instance, you can use Colortek Fusion, Baca, etc.

For a more dramatic metallic effect, apply Colortek Metallo over the surface and leave surface to dry.

For richer marble veins, use one of the Colortek metallic additives and paint with a brush, going over the marble veins to create a duo tone effect. Clean any excess material with a wet sponge and Leave the surface to dry.

4. PROTECTIVE TOP COAT

When a reflective finish is desired or when Venatta is used in wet areas such as bathrooms, you can apply Colortek Carrolux on the surface as a final protective coat.

VENATTA® FLOOR SYSTEM

 Yield: 2kg / m²  5 kg  25 kg

1. SURFACE PREPARATION

- On concrete, apply SX0 PrimeWell, or SX9 HumiGuard.
- On Glazed floor tiles, apply Neogrip.

2. NEOFILLER BASE COAT APPLICATION

- Apply Neofiller in 2 coats and sand with a 40 grid once the surface has hardened.

3. VENATTA APPLICATION

- Apply in two coats. While the second coat is still wet, create the marble stone veins in the surface.

4. PROTECTIVE COAT APPLICATION

- Apply Carrolux liquid or gel to protect the floor and to obtain a sophisticated reflective finish.

CARROLUX[®]

PROTECTIVE TOP COATS

Venatta can be top coated with Carrolux, a transparent top coat specifically engineered for performance in wet areas and to achieve glass-like layered glossy finishes. Carrolux is available in two versions:

Carrolux Gel — best for trowel application and thick coats application leaving a “glass” layer effect.

Carrolux Liquid — for spray application that will respect the stone rugged texture and tactile feel.

IMPORTANT NOTICE

The application of Carrolux will cause a shift in color tonality and intensity, most notably when applied on light colors finishes.

1. WITHOUT CARROLUX

2. WITH CARROLUX
